

QUICK DRYING WOOD GRAIN FILLER LACQUER BASED

A miracle product to say the least! This transparent, nitrocellulose lacquer based filler dries in 10 to 20 minutes. Grain filling can be achieved in about four hours, grain dependant Top coat thereafter. Excellent product wherever productivity, and cost are a significant issue. Apply by brush or spray as per label directions. **Wait one hour then *only sand smooth with the grain, do not sand off.*** Repeat second application*. Available in natural color only. Tintable with our solvent based stains or our U-T-C Colorants. Can be top coated with most nitrocellulose lacquers, pre-cat lacquers, conversion varnishes, HYDROCOTE® brand water-based finishes and most other water-based finishes including latex paints. Coverage, 500-600 sq ft per gallon.

This product is amber tone in color, like a regular lacquer hence not recommended over light color stains

For optimum results, consult label directions prior to use.

*Applying too many coats can affect clarity of the filler. As such, only **two coats** are recommended over mahogany or walnut and three coats over ***natural oak.***
